

How to Plant a Large tree

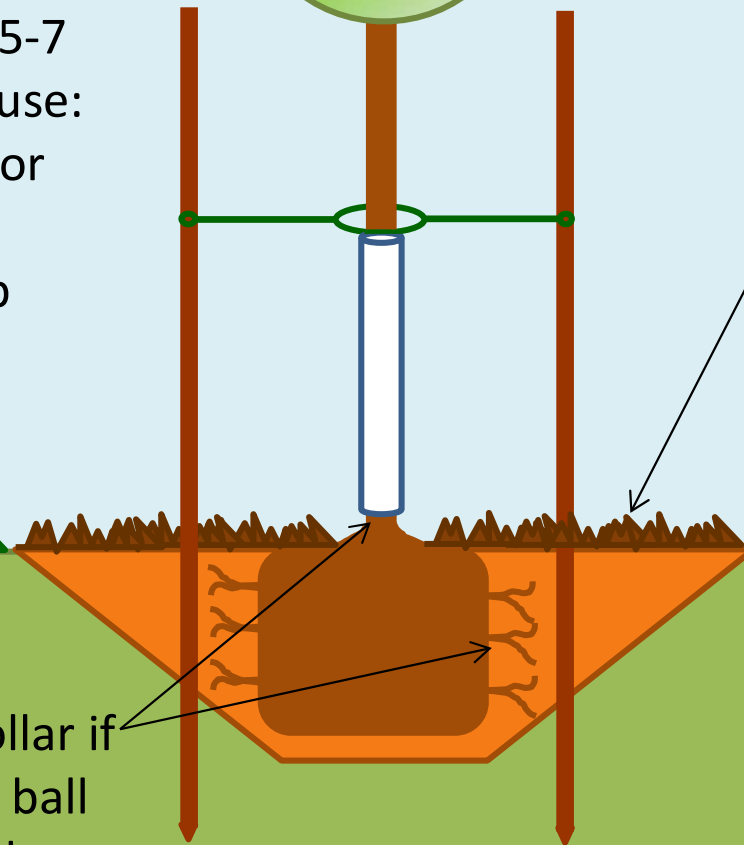

For large deciduous or evergreen trees that are in 5-7 gallon containers or larger, use:

- (1) white 2' bark protector
- (2) 2"x2"x5' stake
- (1) section of arbor strap
- (1) bag of mulch

Mulch using the 3'x3"x3" rule:

- 3' ring of mulch
- 3" deep
- 3" away from root collar

*It is critical to find the root collar if it is not exposed at top of root ball and adjust the depth of the holes accordingly. Also, be sure to cut any circular roots growing around the root ball to ensure outward growth.
